Senior Product Engineer | Ruby on Rails | SaaS, APIs & Full-Stack Web Platforms

SUMMARY

Senior product engineer with 14+ years building Ruby on Rails applications and APIs for SaaS, education technology, and mobile products. Works across product discovery, user research, systems design, and full-stack implementation. Built a microschool platform from scratch in a four-developer team; previously led a six-engineer team and modernized 500,000+ lines of legacy code.

WORK EXPERIENCE

Senior Product Engineer (Ruby on Rails), Contract

May 2024 — Present

KaiPod Learning (Y Combinator S21)

Boston, MA / Remote

- Building Newton, a Rails platform with Hotwire Native mobile apps for KaiPod's Partner Network of 150+ schools across 30+ states, in a fast-moving four-developer team.
- Partner with microschool founders and teachers to research day-to-day operational needs and translate them into full-stack product features.
- Implement native controls and widgets for Hotwire Native on iOS and Android, including bottom navigation, dialogs, and custom sidebar-menu and page-transition optimizations.
- Lead product discovery from research through implementation: interview stakeholders, create AI-assisted mockups with Claude and Pencil, draft Linear project documents, and break approved initiatives into estimated implementation tasks.
- Implemented Stripe APIs and webhooks for recurring monthly billing and customizable per-student plans.

Lead Software Engineer

Aug 2021 — May 2024

Decisiv, Inc.

Glen Allen, VA / Remote

- Owned architecture and technical planning for the Pricing application within a six-engineer team; mentored junior engineers and approved most pull requests.
- Reduced page-load times by 20-80% for complex workflows through N+1 elimination, bounded queries, lighter JavaScript, and asynchronously loaded React widgets.
- Cut CircleCI workflow time from 40 to 8 minutes by modernizing the test suite, updating Capybara, removing redundant specs, and parallelizing execution.
- Championed incremental upgrades of 500,000+ lines from Rails 4.0/Ruby 1.8 to Rails 7.0/Ruby 3.1 using next_rails, target-version tests, and smoke testing.

Ruby on Rails Engineer

Jul 2017 — Aug 2021

Decisiv, Inc.

Glen Allen, VA / Remote

- Redesigned and redeveloped product applications to improve API and application performance; integrated third-party systems to expand product functionality.

Ruby on Rails Engineer, Full-time

May 2016 — May 2017

Paper Kite Ltd (PaperKite)

Wellington, New Zealand / On-site

- Developed resilient Ruby on Rails APIs for BPme, a mobile in-car fuel payment app handling high traffic and external payment service integration.
- Supported BPme's staged Jul 2016 rollout with sub-second system response for site-status checks and pump authorization across 100+ designed screens.

EDUCATION

Universidad Tecnológica Nacional

Mar del Plata, Argentina

Bachelor of Science in Computer Science

Jul 2009 — Dec 2014

SKILLS

- **Languages & Frameworks:** Ruby, Ruby on Rails, JavaScript, React, Hotwire, Hotwire Native, Tailwind CSS
- **Backend & Cloud:** PostgreSQL, Redis, Sidekiq, AWS, Stripe, API development
- **Testing & Delivery:** Test-driven development, CI/CD, Capybara, CircleCI, Datadog, performance optimization
- **Product & Process:** Product discovery, user research, systems analysis, Anthropic Claude, GitHub Copilot, Linear

LANGUAGES

Spanish: Native | English: Full professional proficiency
